### ✓ Applications

This primary standard Range are designed to test, adjust and calibrate measuring instruments, mechanical or electronic pressure by comparison (pressure gauges, pressure transmitters or sensors or switches)

The dead weight tester consist of a pressure generator connected to a compressed air source, a piston/cylinder unit, a set of weigh identified. The capstan can adjust the pressure by the gas through the piston. This pressure is balanced by the piston / cylinder which compares the instrument to calibrate the values of pressures generated by the standard.

This reference instrument are used in factory or calibration laboratory. They are robust and easy to use and have a high long-term stability.

- Calibration :	Our dead weight tester are calibrated under the following conditions of use : Temperature 20°C - Pressure atmos. 1013.25 hPa - Humidity 50% - acceleration 9.806 In case you don't use it under the conditions mentioned above, it is necessary to recalcu pressure generated by the dead weight according to the different variables.		
- Fluid :	The system of automatic lubrification integrated into the dead weight avoids the risks of contamination piston/cylinder. Colorless, compatible mineral oil with medical or food uses volume of the reservoir 20 cm <sup>3</sup>		
- Source Pressure :	Dry air - gas connection ¼ cylindrical female - This balance needs to be connected to a pressure source.		
- Check/adjust the seat ∶	leveling bubble and adjustable feet		
- Connecting for the instrument to be tested :	swivel G1/2 standard – other optional fittings		
- Rotating weigh :	Training masses : manual rotation		
- Crankcase :	Light alloy aluminium AG3 + high-resistance paint		
- Capstan :	removable for transport		
Piston/cylinder :	Single piston treated steel or stainless steel + hard chrome - <b>Répeatability</b> : 3.10 <sup>.5</sup> - <b>Sensitivity</b> : 1.10 <sup>.5</sup> - <b>Precision dead weight</b> : 10 <sup>.4</sup>		
- Weight :	non magnetic stainless steel – <b>Total</b> weight of the set of weights from 4 kg to 48 kg depending on model –Ergonomic shape of the masses, easy loading of the masses on the bell - <b>Marking</b> corresponding with the measuring unit choose (bar, mbar, KPa, PSI etc) <b>Gravity</b> : standard (9.80665 m/s <sup>2</sup> ) or local gravity without supplement		
- Operating temperature:	18 to 28°C – 64 to 82°F
